**Simply, The World's Best  
All-Weather Sports Surface**

Nova Sports U.S.A. is dedicated to providing the acrylic surfacing buyer with a superior product and the highest level of service. We produce high performance acrylic coating systems for all types of recreational use. Complete technical support is provided to the owner, contractor, and specifier.

Our goal of making every product in the Novacrylic line second to none in quality and performance is our guarantee that choosing a Novacrylic system will result in your total satisfaction.

A premium surface without a premium cost. Upgrade for the price of an ordinary color coating.

Nova Sports U.S.A. has a Novacrylic all-weather surface to satisfy everyone's game. Texture can be adjusted to achieve whatever speed and ball bounce the owner wishes.

Nova Sports distributes our products through a network of tennis court builders worldwide. We are happy to try to answer any questions you may have regarding all-weather acrylic surfaces and recommend a qualified builder to apply our products.

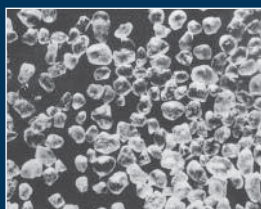

**Ask for Nova!**  
**It's all we do.**  
**We have to do it better.**

#### MAGNIFICATION 32 TIMES

Ordinary sand-sharp abrasive

Non-angular smooth crystals in all Novacrylic textured materials.

## CHOOSE THE FINEST HIGH -

### TEXTURE

The texture of all Novacrylic surfaces is achieved by using non-angular aggregates. Since there are no sharp edges, we are able to produce more texture with less abrasiveness. This means that tennis balls and shoes last longer and injuries such as ankle twists and sprains, shin splints and monkey muscles are reduced when playing on Nova Sports surfaces.

### COMBINATION® SURFACE

The Combination Surface system is an all in one blend of both the Novacoat® finish and Novafil® texture coats. This ultra-premium tennis surface provides unsurpassed resilience, flexibility and ultra-violet resistance. The systems proprietary texture blend provides a consistent low abrasive surface, while low glare properties further enhance the playing experience. .

### NOVACOAT®

100% acrylic heavily pigmented topcoat. Novacoat is the final coat. It is designed to produce a tough flexible wearing surface that reduces glare and provides good footing for the players. This color surface will not fade nor will it rub off on the tennis balls. Novacoat is available in a full range of colors. Custom colors are available on request.

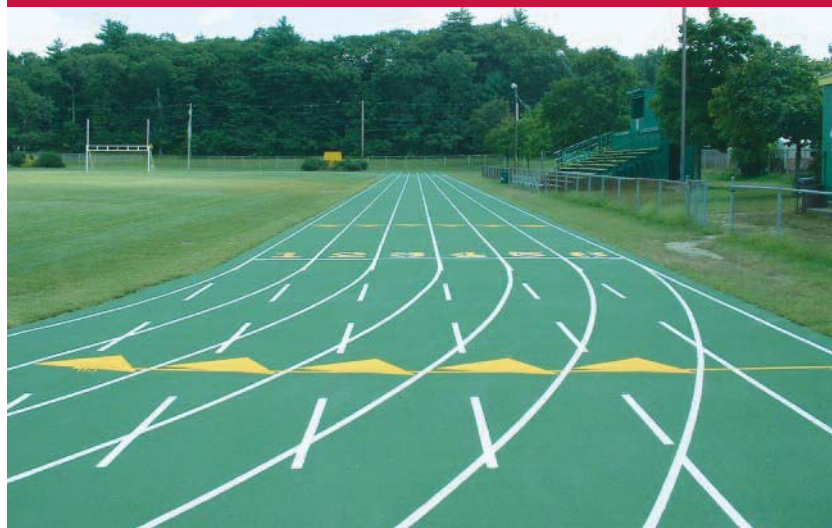

### NOVACUSHION®

Rubber filled 100% acrylic coating formulated to provide some shock absorbing qualities to a tennis court. Applied in multiple layers, it is then covered with a Novacrylic color system. Increased comfort and lessened fatigue is realized by this system.

### ULTRACUSHION®

The ultimate acrylic shock absorbing surface. Great for indoor and outdoor courts. A combination of various EPDM rubber granules encapsulated in a special super flexible 100% acrylic binder give Ultracushion the ability to provide a high level of comfort to the tennis player. This all-weather system retains the low maintenance, durable features found with all Novacrylic surfaces.

#### NOVATRACK SMITHFIELD, RI, USA

# PERFORMANCE ALL WEATHER COURT SURFACE

Qualify for  
LEED Credits

## NOVAPOXY®

A two part water based epoxy primer designed to promote adhesion between the concrete slab and acrylic surfacing system. The system is unique as it does not require acid etching, is tinted black for added hiding and limits moisture vapor transmission. 100% environmentally friendly.

## NOVABOND®

Novabond is Nova Sports' answer to successful surfacing of portland cement pavements. It is used as a primer and as an additive to a slurry mix that promotes adhesion of acrylic coating to concrete. Novabond is also the base liquid for our high performance patching mix.

## NOVATEX®

Novatex is the whitest, highly hiding, textured line paint available anywhere. This 100% acrylic line paint for application by hand brushing or roller is rich in white hiding pigments and fortified with optical brighteners. The texture makes the line play the same as the rest of the court surface. No tennis ball skidding on a Novatex line. These sharp, brilliant white lines are to the court as frosting is to a cake.

## NOVALINE®

Non textured line paint for spray application.

## SEAL A LINE®

100% acrylic primer for lines applied with the use of masking tape. Seal A Line seals the edge of the masking tape so that no paint creeps under the tape. The result is a line that is so sharp that it looks like it was cut in with a razor.

## NOVACAULK®

Novacaulk is a two step system of repairing cracks. Novacaulk when cured forms a flexible membrane that bridges over the crack. This allows the pavement to move without breaking the repair. Most successful results are cracks one half inch or less in width. We have a good history with this method. It is a "band-aid" repair that allow some courts that otherwise have been unusable to be upgraded to a playable condition.

## NOVATRACK®

Novatrack is a high pigmented 100% acrylic filled with colored EPDM rubber. Novatrack is designed for use on new asphalt or over existing color surfaces including Latex and SAR Tracks. Novatrack is perfect for making older tracks look new.

## NOVAPLAY®

Novaplay is a special coating that looks like a tennis court surface but is formulated with tougher acrylics and has the ability to stand up to rough service. Novaplay coating systems are designed to be used on asphalt and concrete playing surfaces that get more of a beating than the typical tennis court.

## NOVAPLAY II®

Novaplay II is a variation of Novaplay with a smooth, slightly textured finish. This complete system is just the surface for such sports as in-line skating, street hockey, basketball, shuffleboard and other games where a smooth non-skid coating is required. Novaplay II is designed to be used as a system with our new super strength resurface base coat.

## NOVASURFACE®

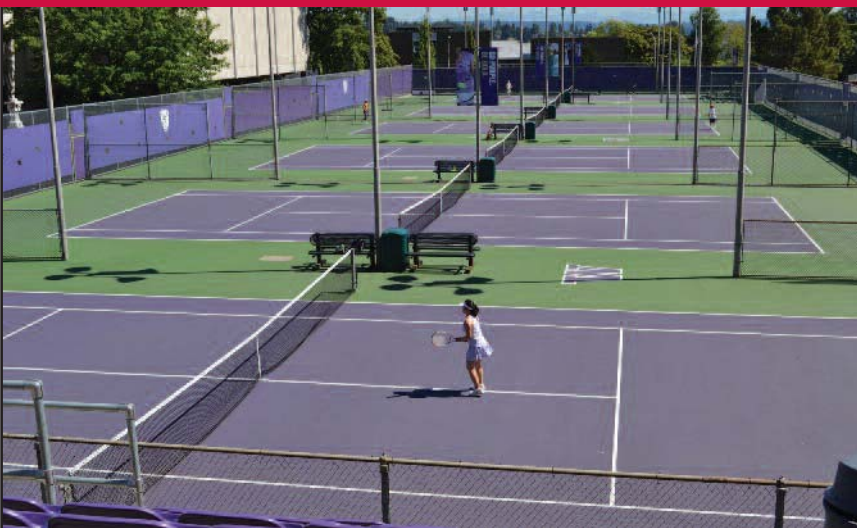

Pure acrylic resurfacer used to hide defects in the pavement prior to the application of a Novacrylic color system. Contractor adds sand and water to adjust filling properties to suit particular job requirements. Unlike asphalt type resurfacers, Nova surface is flexible and inert. It is totally compatible with the Novacrylic color coating systems.

## ENVIRONMENTALLY RESPONSIBLE

We do not use asbestos, mercury, formaldehyde, lead, ammonia or any other hazardous products in the manufacturing of Novacrylic products.
